

Our Process

Phase I: Initial Consultation

At our first meeting, we get to know you and your family. We learn about your design preferences, how you plan to use the space and your overall budget for the project. As we discuss your goals and ideas, we take precise measurements of the room with a 3D modeling camera.

Phase II: Preliminary Design

Next, we uncover your design style. Together, we pull colors, textures and pictures to create a mood board to explore what feeling or emotion you want each room to evoke. Behind the scenes, we consider spacing and how your family moves through each room to develop a preliminary floor plan. At our next meeting, we will present the basic layout of the space for your approval.

Phase III: Design Development

With the floorplan in place, we fill in the details of the space and refine the design. A 3D model of your room allows you to visualize the new layout from every angle. As the design takes shape, we are able to create an itemized budget for the project.

Phase IV: Project Planning

Next, the finishing touches of the project come into focus. We work together to finalize paint colors, hardware finishes and lighting selections from options we've identified. As you help refine the design, we sharpen the budget to give you an accurate estimate of project expenses. We present the final design plan to you and solidify your selections.

Phase V: Construction

With your approval and an initial deposit, construction can begin! We manage every detail of the renovation. We create a project timeline, order materials and schedule contractors. You can expect clear communication every step of the way. We will provide regular construction updates, but you can also monitor progress, view invoices or see the project schedule at any time through your Online Portal.
